Diagnosis and treatment of %endometriosis% using %prothymosin% and
%prothymosin% specific binding agents - protein detection method using
DNA probe for disease diagnosis, prognosis, therapy and antisense
oligonucleotide for gene therapy

ABSTRACT: A method (I) for diagnosing %endometriosis%, which consists of
detecting elevated levels of %prothymosin% gene product in a sample, is
new. Also claimed are: a method for monitoring the progress of
%endometriosis% by comparing the amount of %prothymosin% in 2 test
samples, taken from the same patient at different times; a kit for
detecting %prothymosin% and/or diagnosing %endometriosis% which
consists of a compound that binds a %prothymosin% gene product; the
diagnosis of %endometriosis% by detecting the presence of a
%prothymosin% gene product in %endometriosis% tissue from a subject in
vivo; a method for treating %endometriosis% which involves
administering a DNA probe which consists of a detectable label and a
ligand that specifically binds prothymosin, identifying an
endometriotic lesion in situ by locating the bound label and excising
the lesion; a method for screening for compounds that modulate the
expression of %prothymosin% in an endometrial cell; and treating
%endometriosis% by administering a compound which decreases
%prothymosin% activity. The above may be useful to diagnose, prognose
and treat %endometriosis% and antisense %prothymosin% gene
oligonucleotides may be used in gene therapy. (58pp)

English Abstract

Prothymosin expression is up-regulated in endometriotic tissue. This invention provides methods of diagnosing %endometriosis% by detecting up-regulation of a %prothymosin% gene product, and methods of treating %endometriosis% by down-regulating expression of %prothymosin% in ectopic or eutopic endometriotic tissue.

French Abstract

Selon cette invention, on regule positivement l'expression de la prothymosine dans un tissu endometrial. L'invention concerne des procedes de diagnostic de l'endometriose par la detection de regulation positive

d'un produit genique de prothymosine ainsi que des procedes pour traiter l'endometriose par la regulation negative de l'expression de prothymosine dans un tissu endometrial ectopique ou eutopique.

ABSTRACT: A method (I) for diagnosing %endometriosis%, which consists of
detecting elevated levels of %prothymosin% gene product in a sample, is
new. Also claimed are: a method for monitoring the progress of
%endometriosis% by comparing the amount of %prothymosin% in 2 test
samples, taken from the same patient at different times; a kit for
detecting %prothymosin% and/or diagnosing %endometriosis% which
consists of a compound that binds a %prothymosin% gene product; the
diagnosis of %endometriosis% by detecting the presence of a
%prothymosin% gene product in %endometriosis% tissue from a subject in
vivo; a method for treating endometriosis which involves administering
a DNA probe which consists of a detectable label and a ligand that
specifically binds prothymosin, identifying an endometriotic lesion in
situ by locating the bound label and excising the lesion; a method for
screening for compounds that modulate the expression of %prothymosin%
in an endometrial cell; and treating %endometriosis% by administering
a compound which decreases %prothymosin% activity. The above may be
useful to diagnose, prognose and treat %endometriosis% and antisense
%prothymosin% gene oligonucleotides may be used in gene therapy. (58pp)
